5 Principle

-

6 Test equipment

6.1 General

Figure 1 — Bending device with two supports and a former

Figure 2 — Bending device with a V-block and a former

Key

Figure 3 — Bending device with a clamp

6.2 Bending device with supports and a former

6.2.1

6.2.2

6.3 Bending device with a V-block

The tapered surfaces of the V-block shall form an angle of $180^\circ - \alpha$ (see [Figure 2](#)). The angle α is specified

6.4 Bending device with a clamp

7 Test piece

7.1 General

7.2 Edges of rectangular test pieces

—

- 1,5 mm, when the thickness of the test pieces is less than 50 mm and more than or equal to 10 mm;
- 1 mm when the thickness is less than 10 mm.

7.3 Width of the test piece

7.4 Thickness of the test piece

7.4.1

7.4.2

Figure 4 — Diameter and inscribed circle diameter of the test piece

7.5 Test pieces from forgings, castings and semi-finished products

7.6 Agreement for test pieces of greater thickness and width

7.7 Length of the test piece

8 Procedure

WARNING — During the test, adequate safety measures and guarding equipment shall be provided.

8.1

8
.

Figure 6 — Legs of the test piece parallel to each other

Figure 7 — Legs of the test piece in direct contact

8.3

α , can be calculated from the measurement of the displacement of the former as

8.4

9 Interpretation of results

9.1

9.2

10 Test report

Annex A

Determination of the bend angle from the measurement of the displacement of the former

α , of a test piece under force. The direct

α , of the test piece

$$\sin \frac{\alpha}{2} = \frac{p \times c + W \times (f - c)}{p^2 + (f - c)^2}$$
$$\cos \frac{\alpha}{2} = \frac{W \times p - c \times (f - c)}{p^2 + (f - c)^2}$$

$$W = \sqrt{\frac{c^2 + (f - c)^2}{2}}$$

Figure A.1 — Values for the calculation of the bend angle, α

Annex B

Bend test at plane strain conditions

B.1 Overview

Key

$b \geq 10 \times a$ and $a > 3$ [see [Annex B](#)]

$b \geq 10 \times a$

$a \geq 3$ [see [7.3 b](#) 2)]

$b \leq 20$ [see [7.3 a](#))]

Figure B.1 — Combinations of thickness (a) and width (b) in relation to plane strain condition, for test pieces given in [7.3](#)

b
 $a) \geq 10$ should be employed.

-
- as a consequence, test pieces can fail;
- increase of the testing force;
- increase of the weight of the test piece;
- the bendability requirements in product standards may not be fulfilled.

B.2 General

η
 η , and the
 θ
 θ

$$\cos \frac{\pi(1-\theta)}{2} = -\frac{2}{3} \left(\frac{\eta}{\eta_0} - \frac{1}{2} \right) \sqrt{\frac{\eta}{\eta_0}}$$

Figure B.2 — Differences in bendability depending on width (b)

B.3 Test piece

$a) \geq 10$ shall be used.

B.4 Assessment

B.5 Test report
